Expert Anchor

Extract the system

```
Analyze the attached document and identify the core framework used for [TASK]. Extract the step-by-step logic, the specific constraints mentioned, and the 'Golden Rules' the author follows. Then, create a comprehensive Master Guide that I can use as a foundation for my own project. Do not summarize; reconstruct the system.
```

Identify Experts

```
Identify the top experts in [Topic] and the signature frameworks they are known for. List their most important books or resources, and specifically tell me where these experts disagree with each other.
```

Context Extraction

Interview Prompt

```
[Goal/Task] Ask me a series of questions—one by one—to gather all the context you'll need to create the best possible launch strategy. Do not move on until I've answered each one.
```

Context File Prompt

```
Now, compile all of my answers into a single, structured 'Context File' that summarizes everything we've discussed.
```

Prompt Synthesis

```
You are a Senior AI Prompt Engineer. I am providing you with two data
blocks:
<Expert_Plan> [Paste the guide from Step 1 here] </Expert_Plan>
<User_Context> [Paste the context file from Step 2 here] </User_Context>
Your Mission: Synthesize these blocks into a single 'Master Execution
Prompt' using the RICECO framework.
Requirements for the Master Prompt:

- R (Role): Assign a world-class persona based on the Expert Plan.
- I (Instruction): Define the clear, step-by-step task to be performed.
- C (Context): Incorporate all relevant details from the User Context.
- E (Examples): Generate 2-3 'Golden Examples' of the tone and style the
  output should follow.
- C (Constraints): List all 'must-haves' and 'must-nots' from both
  blocks.
- O (Output Format): Define exactly how the final result should be
  structured.

Constraint: Do not execute the plan yet. Simply output the final RICECO
prompt for me to use in a clean session.
