Corporate AI Adoption

From Strategy to Architecture — A V-ZUG Perspective

Fabian Gisler · Head of AI · V-ZUG AG

The First Decision

Every company faces this choice before anything else

01

Corporate AI — Three Paths

Choose your strategy based on resources, ambition, and timeline

ADAPT

e.g. Microsoft 365 Copilot

- ✓ Fast enterprise-wide rollout
- ✓ Integrated in M365 ecosystem
- ✗ Limited standard functionality
- ✗ No custom tool extensions

Best for: Organizations wanting quick, low-risk adoption

BUY

e.g. ChatGPT Team, Claude for Work

- ✓ Rich pre-built feature set
- ✓ Zero dev effort, fast onboarding
- ✗ Higher cost, vendor lock-in
- ✗ Data governance concerns

Best for: Teams needing ready-made AI tools without dev effort

BUILD

e.g. Azure AI Foundry, custom platform

- ✓ Full flexibility and control
- ✓ Connects to any internal system
- ✗ Requires internal know-how
- ✗ Higher upfront investment

Best for: Companies with tech capacity and specific needs

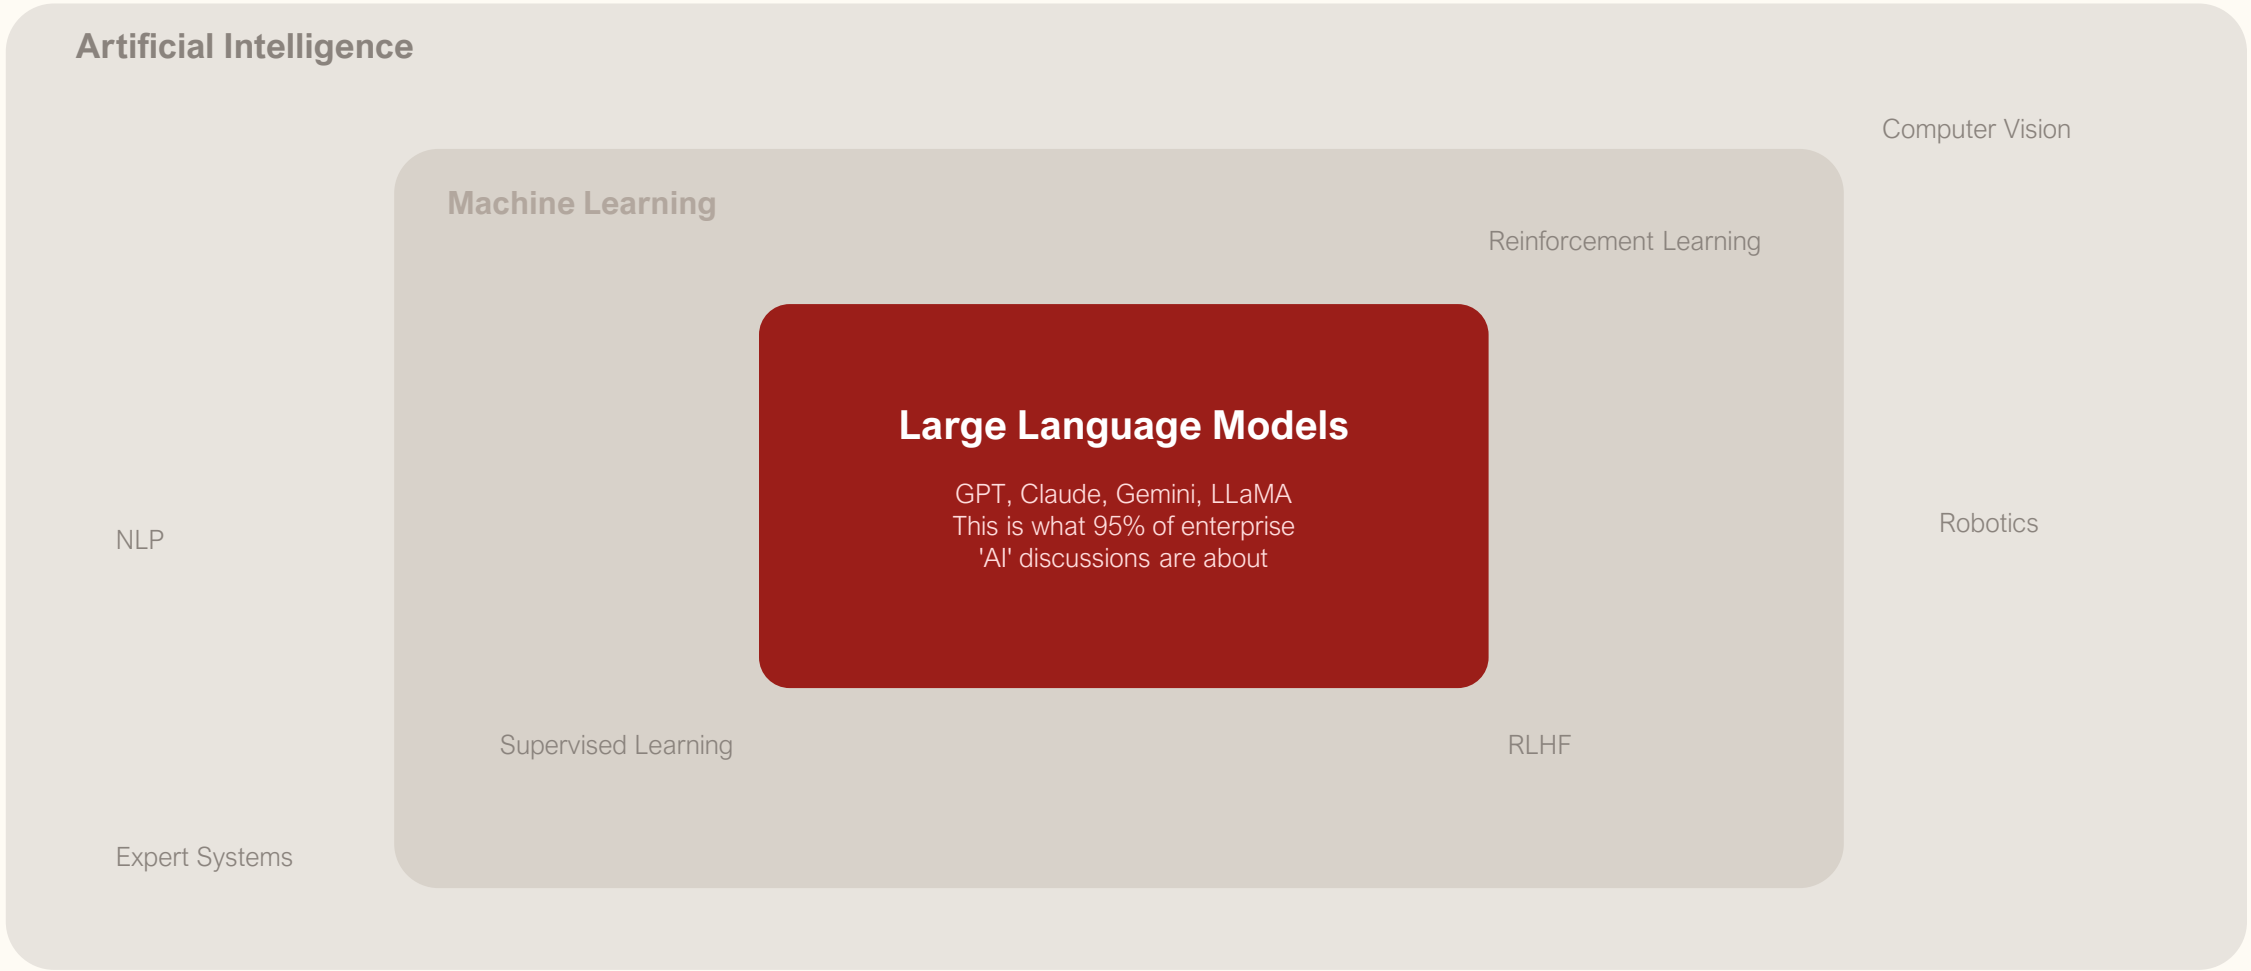

AI in Context

What we actually mean when we say 'AI'

02

When People Say 'AI', They Mean This

A simplified view of the AI landscape

What an LLM Really Is

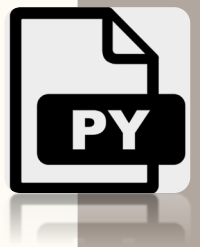

Demystifying the technology behind the hype

model.bin

A file with billions of parameters (~numbers / weights)

\+

run.py

A Python script that loads the file and predicts next tokens

=

Chatbot

A text-prediction engine — not inherently 'intelligent'

The model alone is not the value.

TOOL CALLS are what make LLMs useful in the enterprise.
Search documents, query databases, trigger workflows — that's where the value lives.

Toolcalls — Where Value Is Created

How each strategy leverages tool integration

ADAPT

Copilot (*without Copilot Studio)

Limited

- **Native Tools** — Few built-in integrations
- **Extensibility** — Requires Graph API + licensing
- **Data Access** — Only M365 ecosystem

BUY

ChatGPT / Claude

Strong

- **Pre-built Tools** — Rich plugin ecosystems
- **Setup Speed** — Minutes, not months
- **Customization** — Vendor lock-in, limited control

BUILD

Azure AI Foundry

Full Control

- **Any System** — SAP, SharePoint, JIRA, legacy
- **Full Ownership** — Your data, your rules
- **Dev Effort** — Must build entire tool stack

*Using Copilot Studio for low code / no code development results in hybrid build approach, where foundry tools or azure side tools are required for shipping actual tools

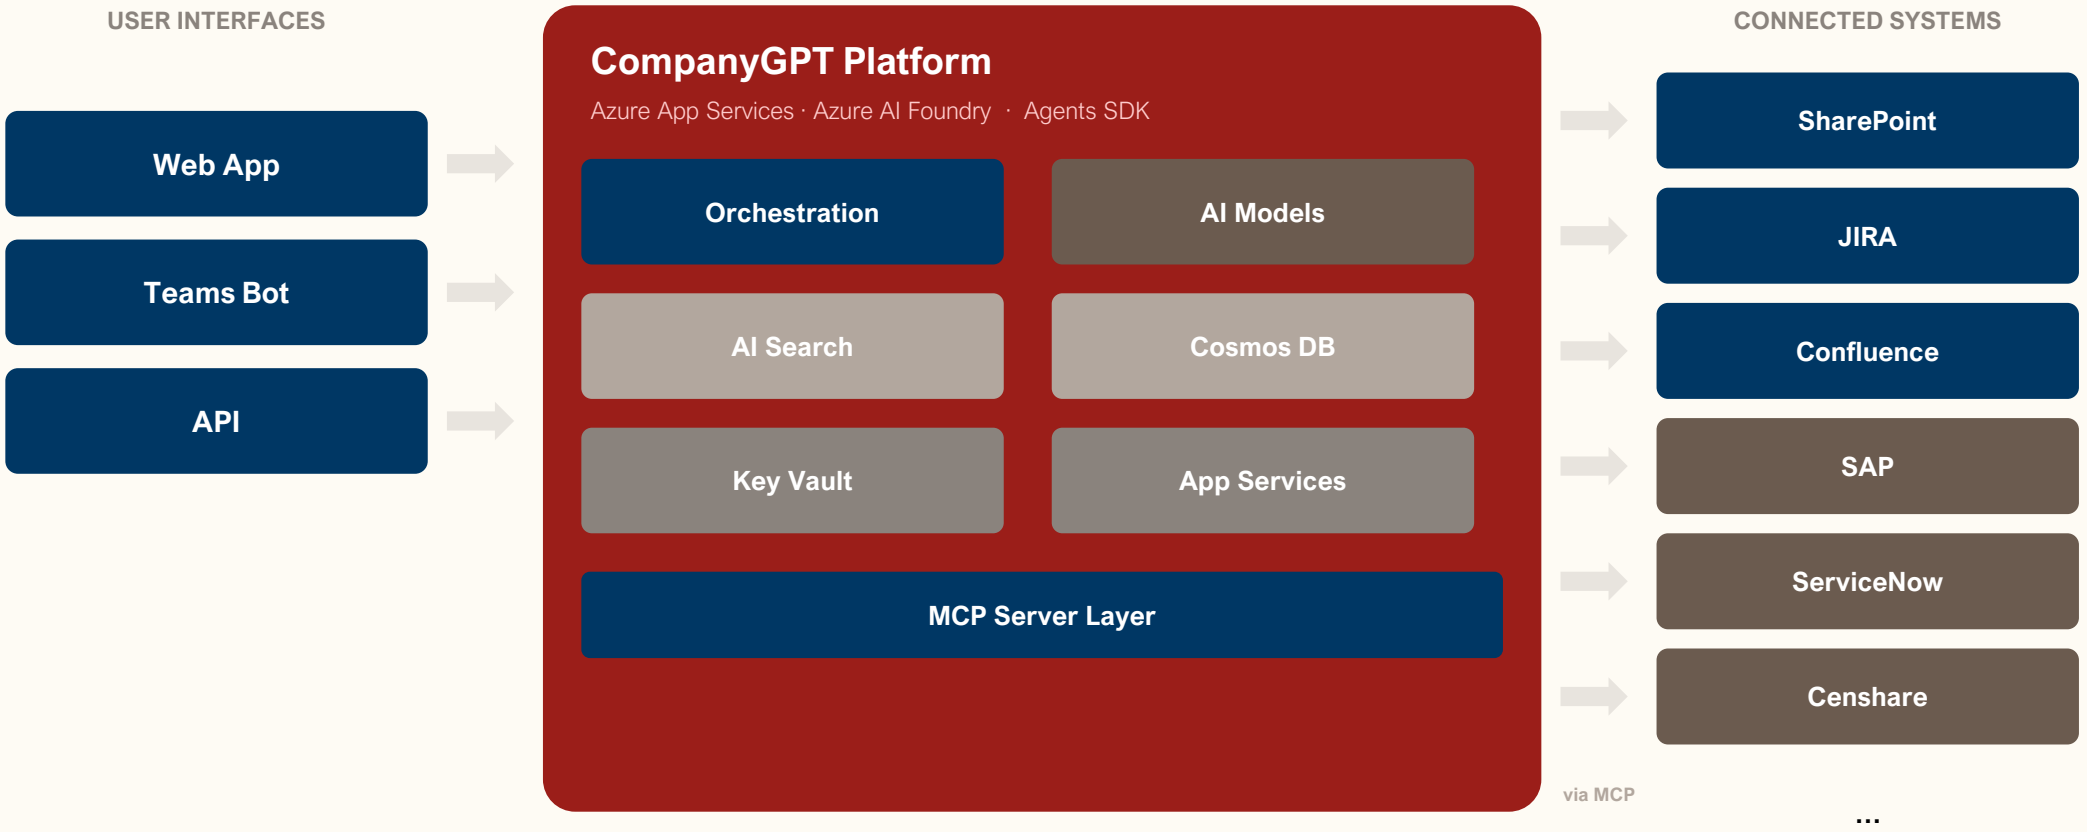

Our Setup at V-ZUG

CompanyGPT — Built on Azure AI Foundry

03

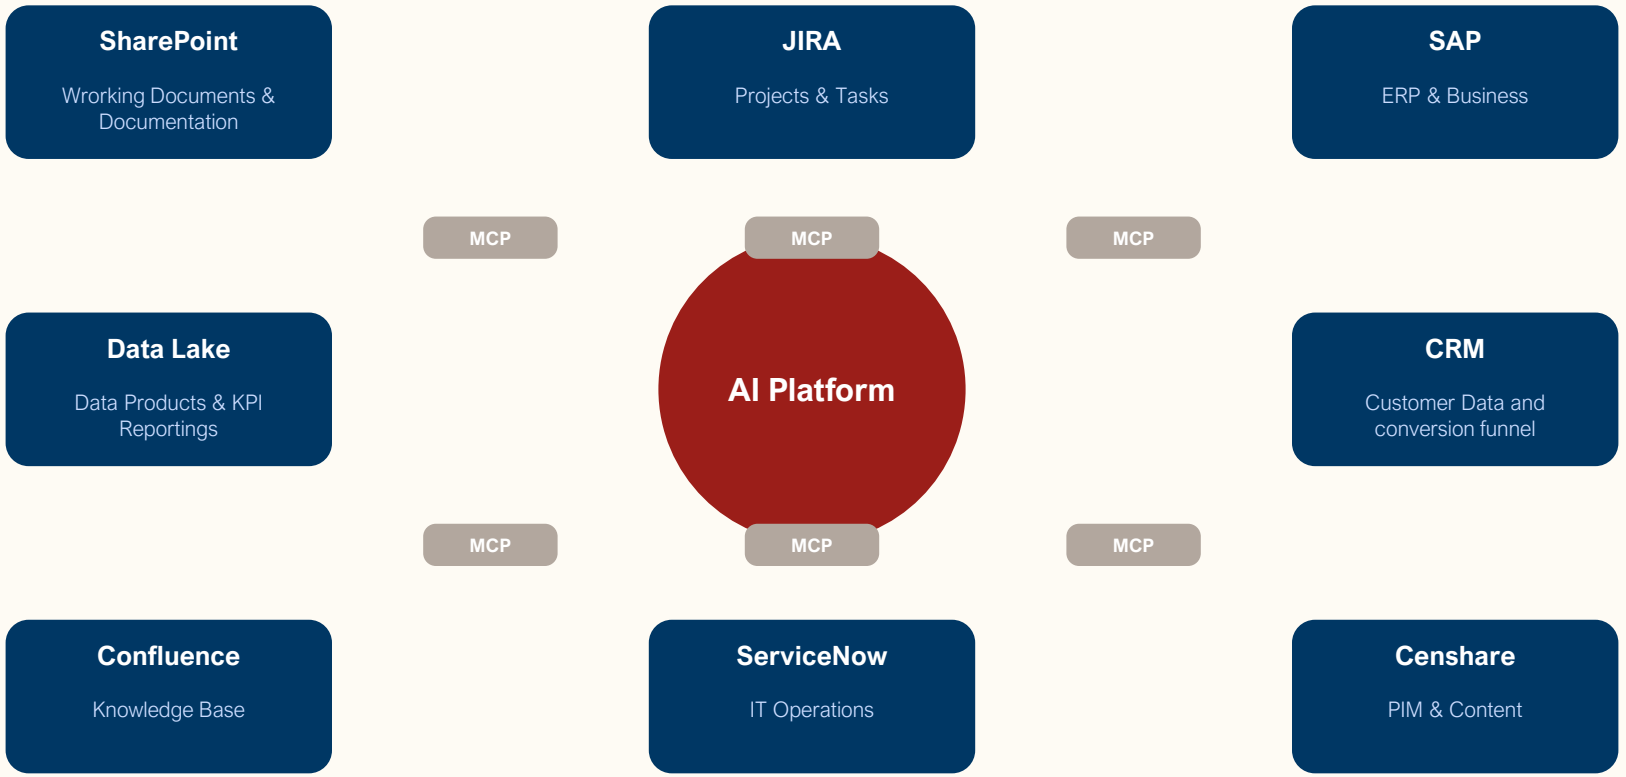

CompanyGPT — Architecture

Simplified system overview

MCP First Architecture

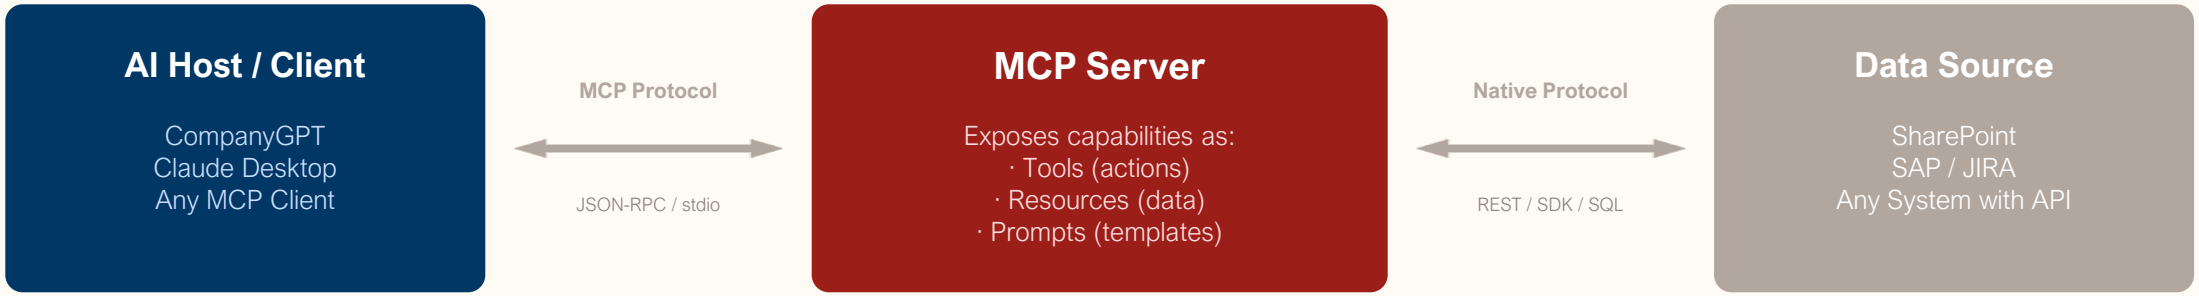

Model Context Protocol — a standardized way to connect AI to everything

Standardized Interface | **Vendor-Agnostic** | **Legacy-Friendly** | **Infinitely Scalable**

How an MCP Server Works

A universal adapter between AI and your systems

The key idea: One protocol to connect them all.

Build Once, Use Everywhere

One MCP Server per system.
Every AI client can use it.

Standard Interface

Tools, Resources, Prompts.
Consistent across all systems.

Legacy Compatible

Wrap any API, SDK, or DB.
No system changes needed.

Key Takeaways

Recommendations based on actual experience & learnings

01

Know Your Strategy

Adapt, Buy, or Build — then commit.
Each path is valid; the worst choice is no choice.

02

Invest in Integration

LLMs are only as powerful as their tools.
The real ROI comes from connecting AI to your systems and workflows.

03

Go MCP First

Standardize your tool layer now.
It's the foundation for scalable, future-proof enterprise AI.

Thank you

BOLOGNA: DATEN UND GRUNDLAGEN

FOUNDATION OF EVERY AI TRANSFORMATION

Governance, Compliance, and Data Readiness at the Core

Hendrik Preis

Dr. Abduljabbar Asadi

In every AI project...

“80% of the work focused on data engineering, governance, and workflow integration.”

MIT Sloan researchers (Kellogg et al., 2025) *(MIT Sloan Management Review, "Agentic AI, Explained")*

Why Most AI Initiatives Fail

"Garbage in, garbage out" becomes "Garbage in, automated at scale"

» Poor data quality leads to:
- Unreliable predictions
- Biased or non-compliant models
- Loss of business trust

"As AI agents scale, data quality and governance become existential issues."

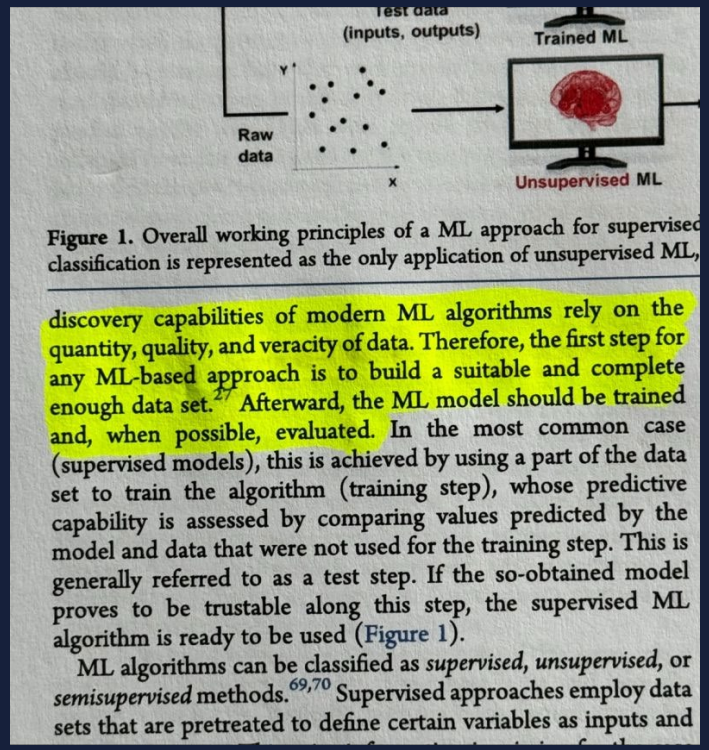

Figure 1. Overall working principles of a ML approach for supervised classification is represented as the only application of unsupervised ML,

discovery capabilities of modern ML algorithms rely on the quantity, quality, and veracity of data. Therefore, the first step for any ML-based approach is to build a suitable and complete enough data set.[27] Afterward, the ML model should be trained and, when possible, evaluated. In the most common case (supervised models), this is achieved by using a part of the data set to train the algorithm (training step), whose predictive capability is assessed by comparing values predicted by the model and data that were not used for the training step. This is generally referred to as a test step. If the so-obtained model proves to be trustable along this step, the supervised ML algorithm is ready to be used (Figure 1).

ML algorithms can be classified as *supervised*, *unsupervised*, or *semisupervised* methods.[69,70] Supervised approaches employ data sets that are pretreated to define certain variables as inputs and

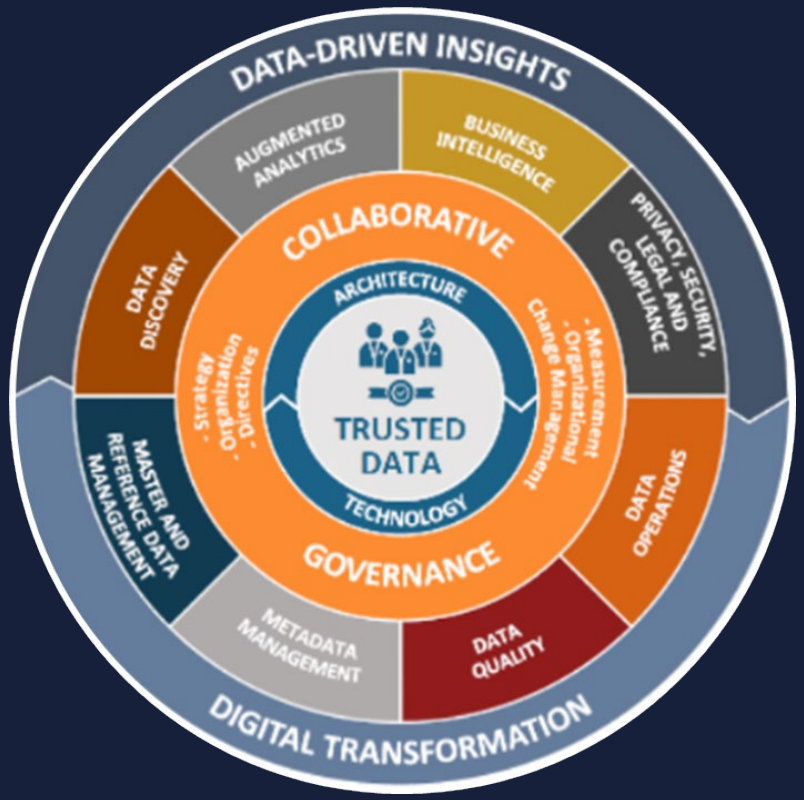

Artificial Intelligence Applied to Battery Research: Hype or Reality?

Publication Date:September 16, 2021

From Data to Trust: The Real Foundation of AI Transformation

Trusted Data Is Not a Tool — It's an Organizational Discipline

- Trusted data is the foundation of digital, analytics, and AI initiatives
- Our goal is to make data a true enterprise asset
- Data must be reusable, scalable, and valuable across the organization
- Most investments focus on AI-driven insights
- Often emphasizing models, dashboards, and outcomes

- What is often overlooked is the foundation
- Data quality, governance, compliance, and operations

Source: https://www.firstsanfranciscopartners.com/

Success is not in AI itself it is in foundations...

Data Quality

Data Governance

Data Compliance

Data Platform

Foundations for data successes

Data

Value

What We Mean by Data Quality

From Technical Accuracy to Business Trust

Key Dimensions

- Accuracy – Correct and validated data
- Completeness – No critical gaps
- Consistency – Same meaning across systems
- Traceability – Clear data lineage and ownership

Governance: Creating Control Without Slowing Innovation

AI Needs Clear Rules to Scale Safely

Key Elements

- Defined data ownership and stewardship
- Clear data standards and policies
- Enterprise-wide data definitions
- Decision rights for data usage in AI models

Compliance: AI Must Be Trustworthy by Design

From Regulation to Responsible AI

Key Focus Areas

- Regulatory requirements (e.g. GDPR, AI Act readiness)
- Data privacy and consent management
- Bias detection and explainability
- Auditability and model transparency

Three key players for data success

Base for adding values with data

Research & Development | Production Manufacturing | Quality | Supply Chain & Logistic | Sales & Marketing | Finance & Accounting | Human Resources | Maintenance | Safty & Environment | IT | After Sales | Facility

End-to-End Data Pipeline

Modern Data Architecture for ETL (Medallion Approach)

A scalable, end-to-end data architecture that connects all your data sources, cleans and structures data, and delivers analytics-ready insights using a proven Bronze–Silver–Gold (Medallion) model.

How It Works

»Connect to Any Source
- Databases, APIs, files, logs, IoT, structured & unstructured data

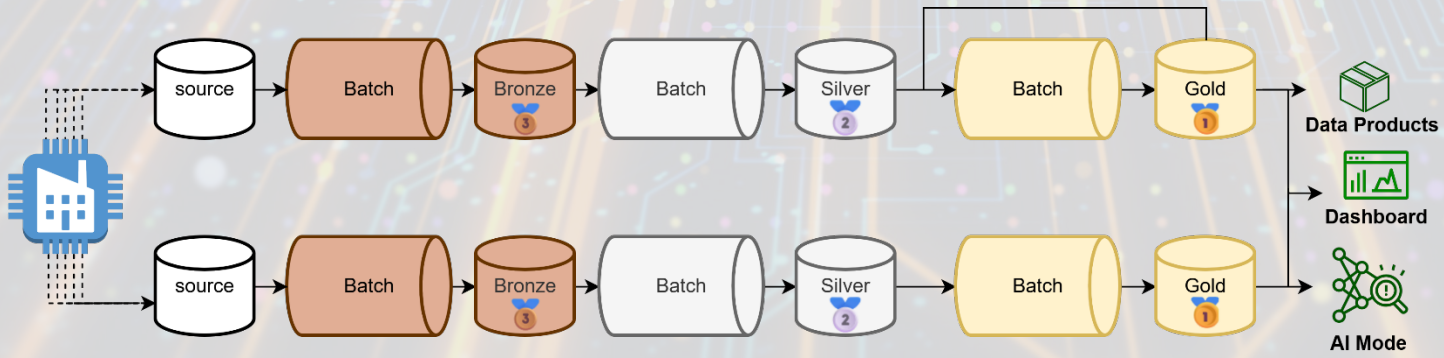

»Bronze – Raw Data
- Secure ingestion of all data with full traceability

»Silver – Clean & Standardized
- Data cleansing, validation, normalization, and integration

»Gold – Business Ready
- KPIs, aggregates, and datasets optimized for BI, AI & reporting

Our Benefits

»Single source of truth
»High data quality & governance
»Faster analytics & reporting
»Scalable and future-proof architecture
»Lower cost & reduced data rework
»Real time data transfer from raw data to value
»Trusted data → Faster decisions → Better business results

Data Modelling

Model data around your business, so everyone trusts the numbers and makes better decisions.

We need a professional data modeling services that transform raw and complex data into clean, structured, and business-ready models that support analytics, reporting, and decision-making.

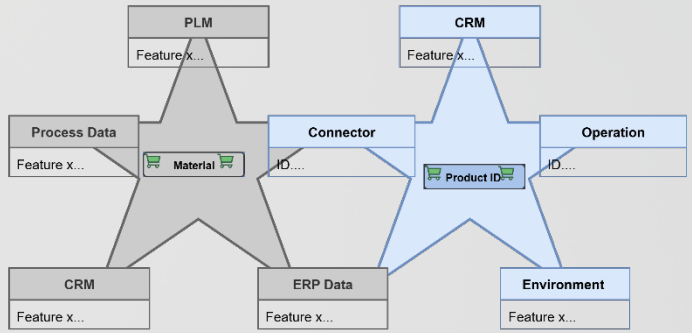

How It Works

» Understand the Business & Use Cases
»Analyze all data sources (databases, files, APIs, logs, etc.)
»Understand source schemas and data relationships
»Design the Data Model (Layer by Layer)
»Validate with Business Users
» Implement & Document the Models
»Enable Reporting & Analytics
»Key for Traceability

Our Benefits

» Data Aligned to Business Reality
»Reports match real business processes
»Clear, shared understanding of data
»Trusted KPIs & Metrics
»Faster & Better Decision-Making
»Self-Service Analytics for Business Users
»Reduced Complexity & Lower Costs
»Improved Data Governance & Compliance

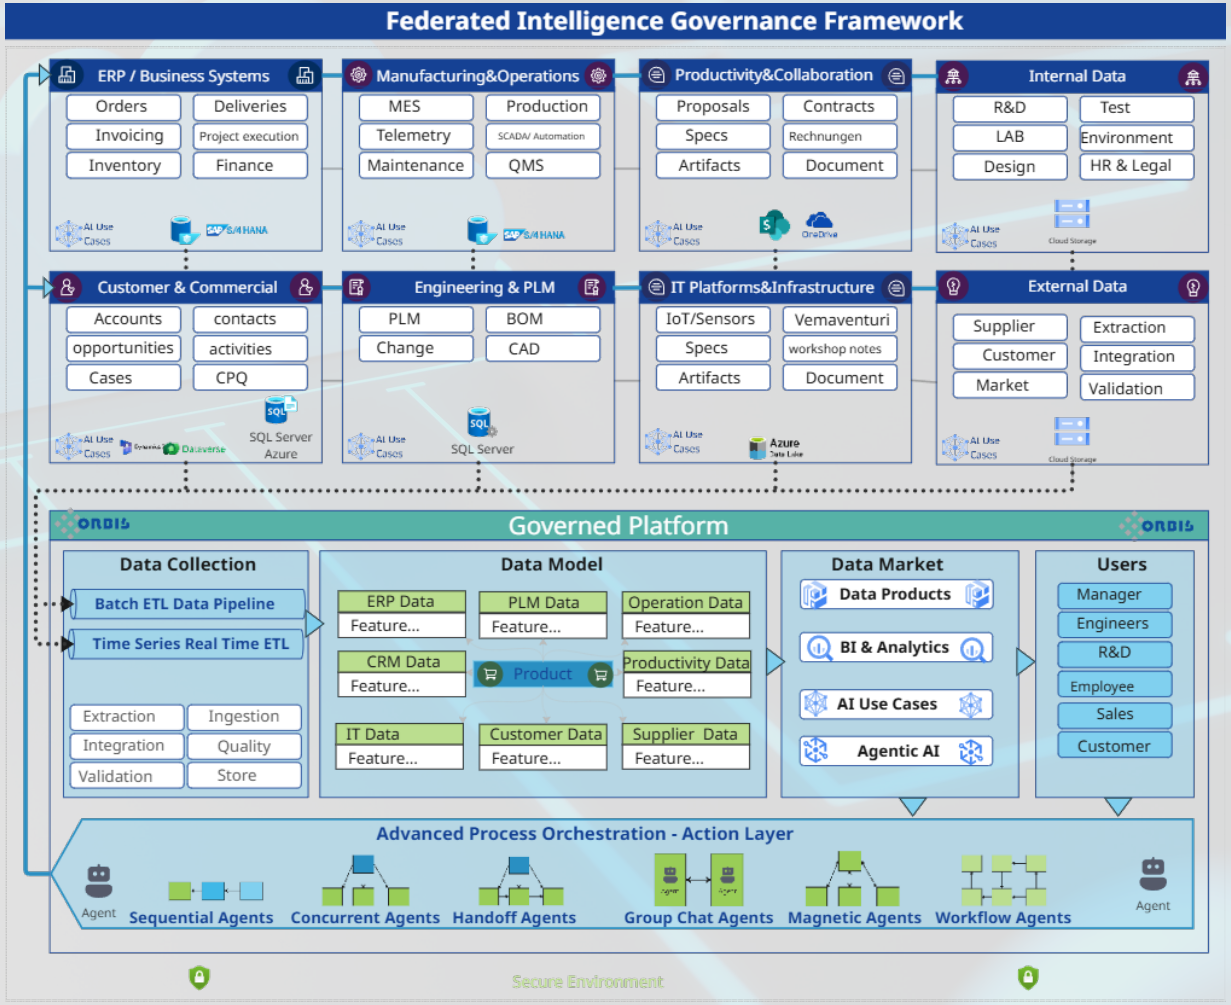

Exemplary Galaxy Data Model

Advanced Federated Intelligence Governance Framework

Platform, Data & AI for traditional enterprise

- Goes beyond centralization by introducing
  - data orchestration
  - advanced analytics
  - and AI-driven processes
- Real-Time Intelligence
- AI-Driven Decisions
- Data Democratization
- Process Automation

Business Impact:

- Centralized, use-case driven data platform
- Strong governance, security & controlled access
- Real-time data transformed into insights
- Value creation with BI, AI, and Agentic AI
- Faster, real-time data-driven decisions
- Cost savings through intelligent AI agents

Our Portfolio

From Data to Value…

Strategy	Change	Implementation
Data Strategy Assessment	Ideation Workshops	Agent Factory
Enable Intelligent Self-Service	Establishing AI Innovation Hubs	Multi-Agent Orchestration
Transforming into an Agentic Enterprise	AI Change Management	Process Intelligence Solutions
Corporate Strategy to Data Strategy		Advanced Analytics and Data Science
		Data Engineering and Modelling
		Agentic Enterprise Data Architecture

DIE AI ADOPTION GAP

WARUM MANCHE AI-IMPLEMENTATIONEN HINTERHERHINKEN

- Tooling-Komplexität & schwierige Implementierung in bestehende Prozesse
- Mangel an AI-Talent / fehlende „AI-Translator“-Rollen
- Fragmentierte Datenlandschaften & unzureichende Data Governance
- Regulatorische und ethische Unsicherheit (AI-Risiken, Compliance)
- Widerstand in Organisation & fehlendes Change-Management
- Fokus auf Features statt Business Outcomes (nur <20 % erreichen Value)
- Innovationstempo der Anbieter überholt Adaptionsgeschwindigkeit der Kunden

Unternehmen, die die Adoption Gap schnell schließen, realisieren früher Produktivität, Effizienz und Wettbewerbsvorteile.

Verfügbarkeitscheck

Antwort generieren & automatische Fallbearbeitung

GPT-gestützte Antwortgenerierung:

Wissensbasierte Reaktionen

VORTEILE

- » **EFFIZIENZSTEIGERUNG:** Schnellere und präzisere Bearbeitung dank datengestützter Prozesse (Rückgang der Bearbeitungszeit um 60%).
- » **OPTIMIERTER PERSONALEINSATZ:** Reduktion der Agentenlast und Einsparung von 4-5 FTEs im E-Mail-Kanal.
- » **SCHNELLERE ANTWORTZEITEN:** Reduktion der durchschnittlichen Antwortzeit von 1-2 Wochen auf 1 Tag
- » **REDUZIERTE OFFENE FÄLLE:** Abnahme von 700 auf 400 offene Fälle gleichzeitig.

AI IM KNOWLEDGE-MANAGEMENT
IMPLEMENTIERUNG EINER KI-GESTÜTZTEN CHATBOT-LÖSUNG

AUSGANGSSITUATION

- mehrere, nicht verbundene Wissensdatenbanken
- Hohes Ticketaufkommen
- Manuelle, zeitaufwändige Ticketbearbeitung
- Fehlender zentraler Wissenszugriff
- Ambitionierte Wachstumsziele

AI powerd Chatbot

LÖSUNG

Mitarbeiter stellen Fragen oder beschreiben Probleme an den Chatbot

Der Chatbot ruft relevante Informationen aus verbundenen Quellen ab

Sofortige Antworten oder nächste Schritte verbessern die Lösungszeit.

- KI-Integration
- Einheitliche Plattform
- Zentralisierter Zugriff
- Selbstlernende KI
- Benutzerfreundliches Design

VORTEILE

- OPTIMIERTE PROZESSE verbessern die Ticketbearbeitung und die Gesamtproduktivität.
- ENTLASTET MITARBEITER von sich wiederholenden Aufgaben und ermöglicht Fokus auf sinnvolle Arbeit.
- VEREINFACHTE INFORMATIONSSUCHE durch zentralen Zugriff auf Daten.
- Unterstützung der Wachstumsziele.

AUTOMATISIERTE DOKUMENTENPRÜFUNG MIT POWER PLATFORM UND AZURE OPENAI

Automatisierte Dokumentenprüfung

Verwendung von PowerApps, um die Lösung in bestehende Geschäftsprozesse zu integrieren

Nutzer laden ein NDA-Dokument über PowerApp hoch

Azure Document Intelligence und OCR (Optische Zeichenerkennung)

Azure Document Intelligence extrahiert Text aus dem hochgeladenen PDF-Dokument

Richtlinienabgleich

Der extrahierte Text wird mit vordefinierten Richtlinien abgeglichen, unter Verwendung

Ergebnisse werden mit einem Ampelsystem angezeigt:

Grün: Richtlinien erfüllt

Gelb: unkrit. Richtlinie unerfüllt

Rot: krit. Richtlinien unerfüllt

Die Nutzer erhalten eine detaillierte Übersicht der Ergebnisse direkt in der PowerApp

VORTEILE

- **ZEITERSPARNIS:** Reduziert die Zeit, die zur Überprüfung von NDAs benötigt wird, erheblich.
- **GENAUIGKEIT:** Minimiert menschliche Fehler durch automatisierte Prozesse.
- **INTEGRATION:** Lässt sich problemlos in bestehende Geschäftsprozesse integrieren.

RFQ AGENT — USE CASE FRAMING

What it is

"An agent that ingests OEM RFQ document packages, structures and normalizes their content, and creates a ready-to-work RFQ opportunity in the supplier CRM."

Whom it serves

- Key Account Management / Sales
- Sales Operations
- Engineering & Controlling (via structured handover)

Triggered by

- New RFQ received via OEM portal or email
- RFQ package uploaded or linked by the user

What it produces

- Standardized RFQ document workspace (SharePoint)
- Normalized RFQ data set with confidence levels
- CRM opportunity incl. required sub-structure (scenarios, positions, volumes, specifications)

Key Characteristics

- Handles different OEM document formats and structures
- Adapts to different supplier CRM logics via configuration
- Supports human-in-the-loop confirmation and correction
- Flags missing & low-confidence information

What measures success

- Time from RFQ receipt to structured opportunity
- RFQ data completeness at handover
- Share of high-confidence extracted fields

NEAPEL: CHAOS, PRODUKTIVITÄT & AGENTS

Komplexität meistern

“Can an agent take $100k and legally turn it into $1M - without human assistance?”

Mustafa Suleyman • Following
CEO, Microsoft AI
Visit my website
5h •

The next big AI milestone I'm watching for: Artificial Capable Intelligence (ACI). Can an agent take $100k and legally turn it into $1M - without human assistance? The latest agentic models get us a LOT closer.

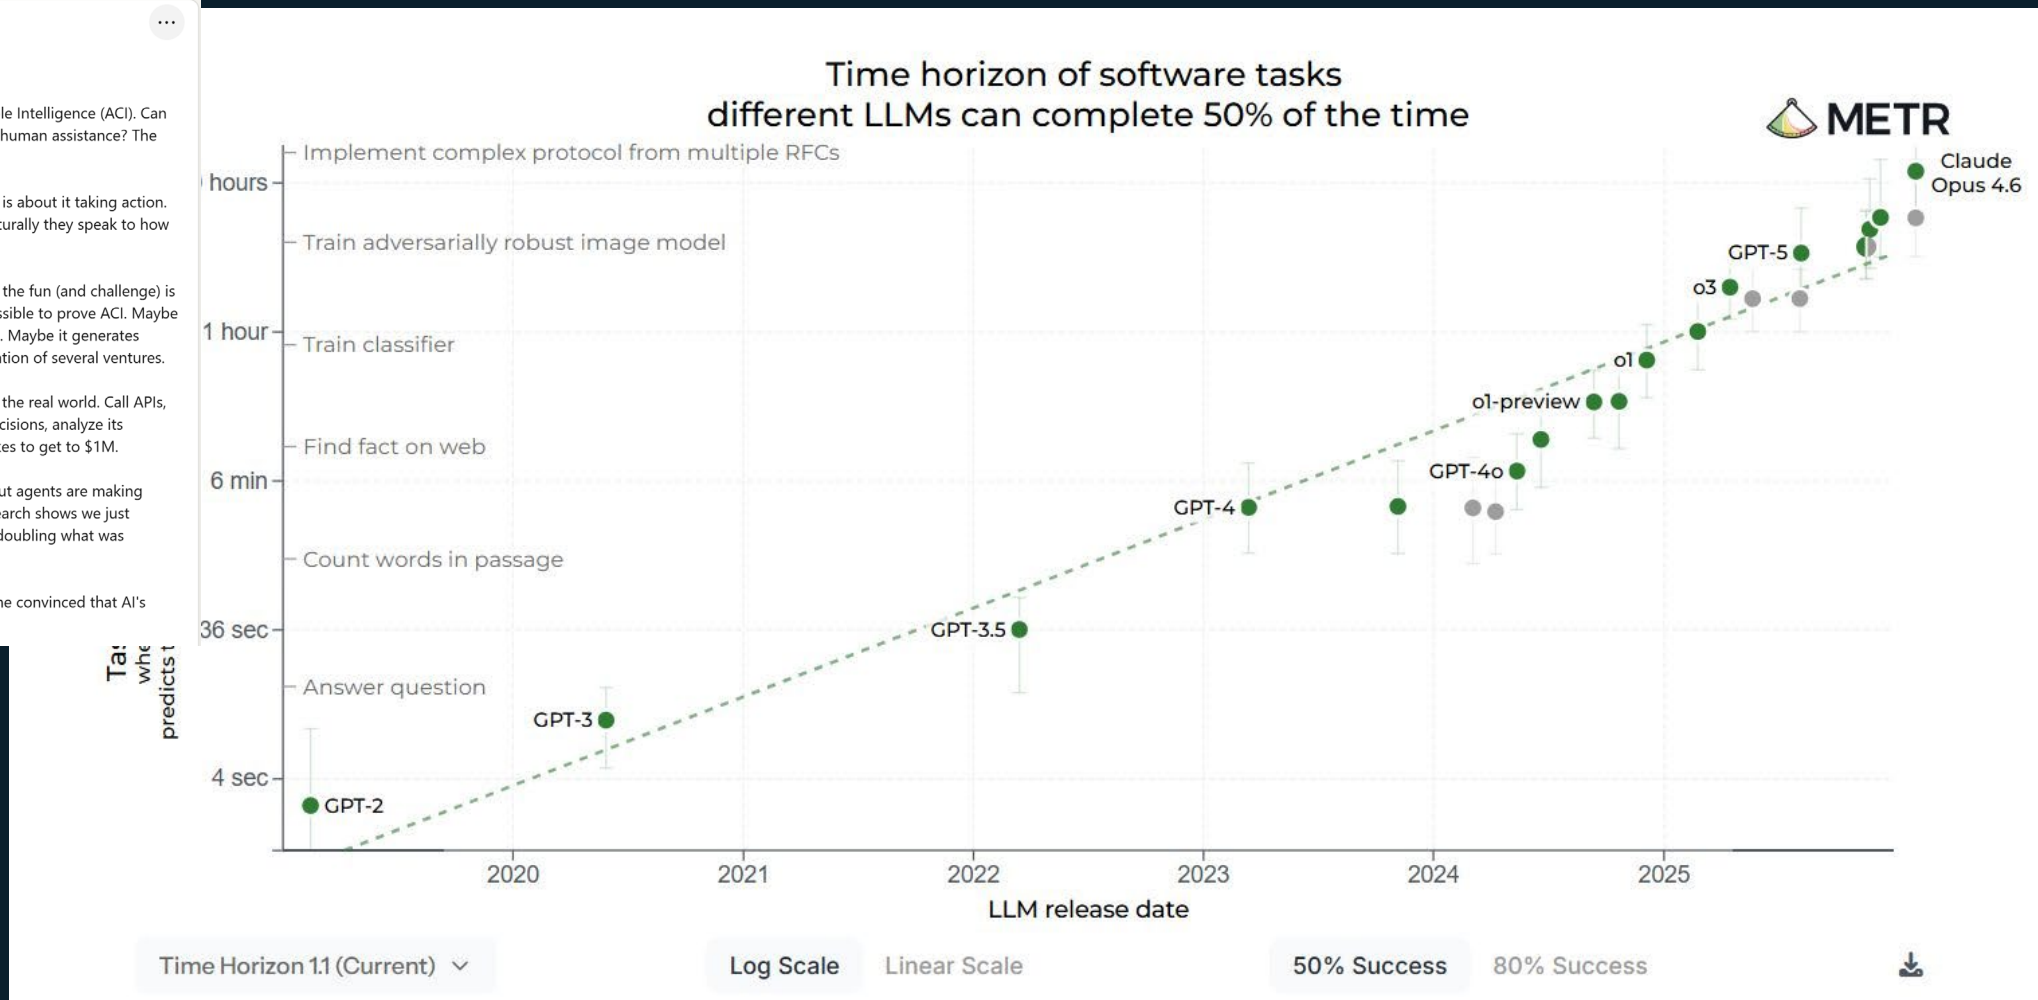

The original Turing Test was about AI's language skills. ACI is about it taking action. As AI becomes agentic, the benchmark shifts from how naturally they speak to how much they can actually get done.

10x-ing an upfront investment is no small feat, and part of the fun (and challenge) is that it's open-ended. There are a ton of different paths possible to prove ACI. Maybe an agent starts and runs a organic cotton apparel business. Maybe it generates educational videos and monetizes them. Maybe a combination of several ventures.

Whatever path it takes, it'll have to operate and execute in the real world. Call APIs, buy or sell things, write emails, make phone calls, make decisions, analyze its progress and so on, for as many times and as long as it takes to get to $1M.

"As long as it takes" is key here. And we're not there yet, but agents are making exponential bounds on task duration. The latest METR research shows we just jumped from agents doing 6-hour tasks to 12-hour ones, doubling what was previously possible.

To me, ACI is the modern Turing Test - and this chart has me convinced that AI's going to pass it sooner rather than later.

Fan-Out Pattern
Run multiple analyses in parallel

Fan-In Pattern
Combine results before making a decision

Switch/Case Routing
Route cases dynamically based on context

Human-in-the-Loop
Introduce human validation where needed

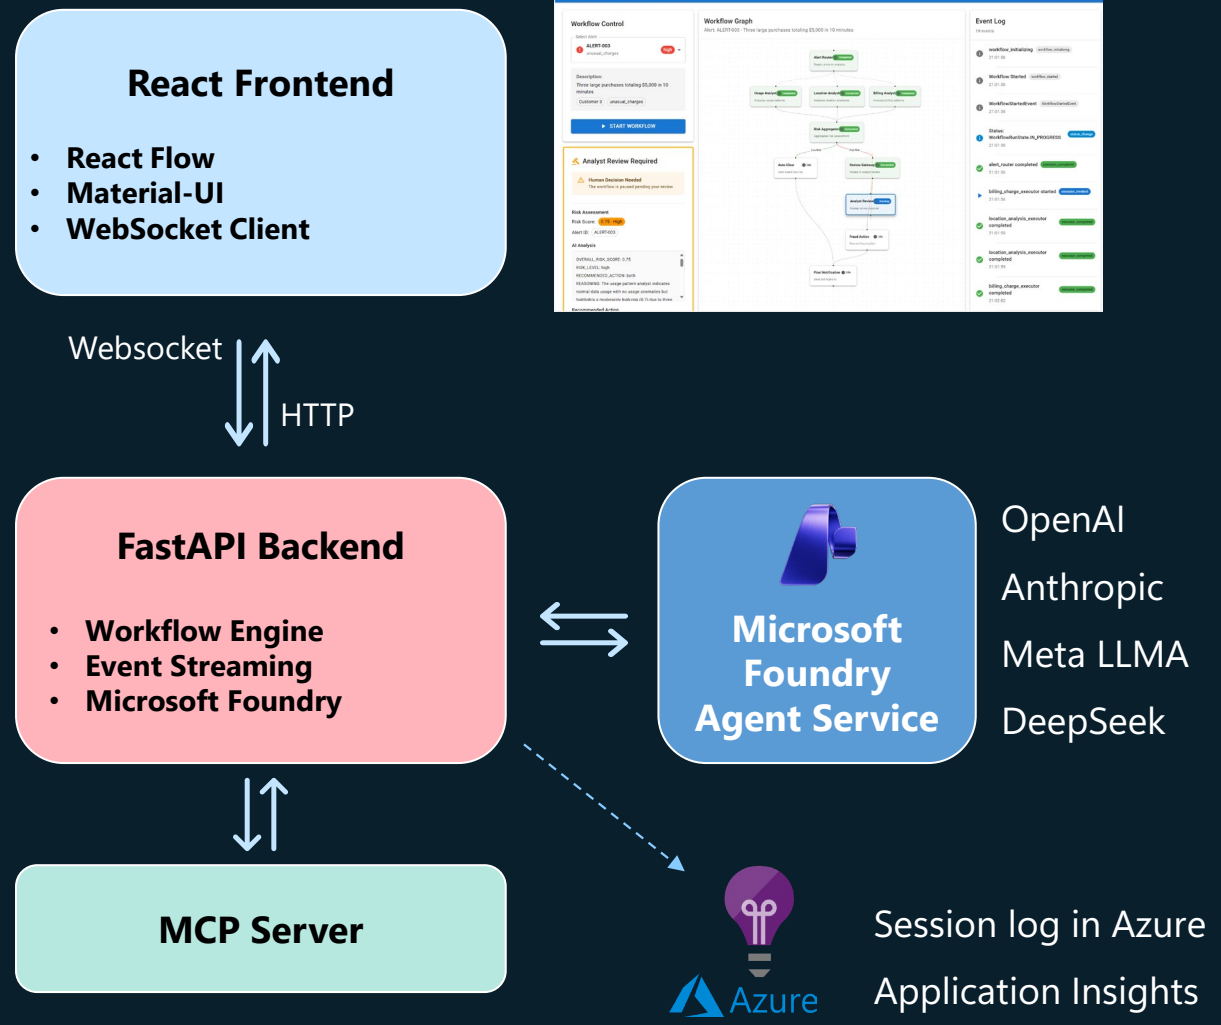

Checkpointing
Resume processes without losing state

Tracing / Logging
Ensure full auditability and transparency

LLM Agent Executors
Scale decision-making with AI agents

Type-Safe Messaging
Ensure consistent and reliable data exchange

Event Streaming
Monitor and react in real time

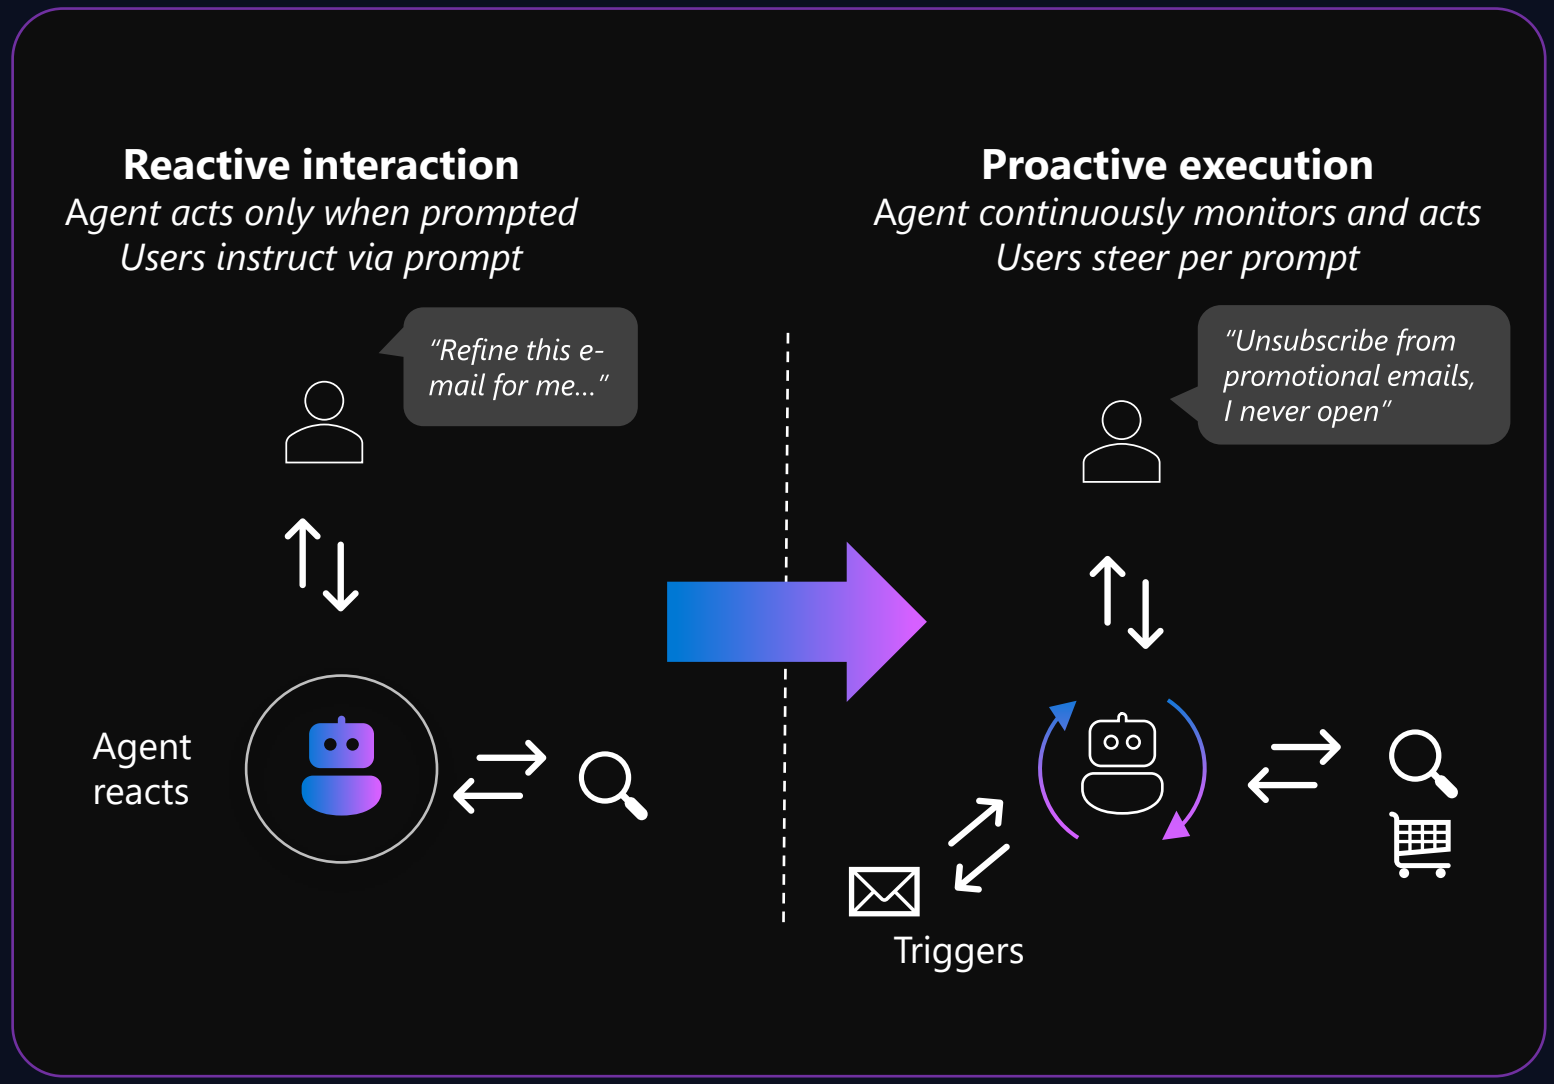

Continuous AI

Agents that monitor, reason, proactively act and even extend their own code

AI is shifting (again)

- Microsoft just announced Copilot Tasks: An AI that does not just talk to you but continually works for you
- It's a broader shift from reactive interactions to agents that continually work in the back
- Agents that are triggered, e.g., by emails, tickets, any event, and that run in regular intervals and (important!) can be steered through instructions at any time
- This changes the way we use agents: Users can delegate tasks, set goals, all while staying in control
